

Operations, Movement Control (MovCon), LOGFAS (LOGREP, ADAMS, CORSOM, EVE), Infrastructure Engineering for Logistics (IEL), RSOM (Reception Staging Onward Movement), Asset Tracking and Logistics Services. One of the institutions taking part in the workshop's preparations is also the **Multinational Logistics Coordination Centre (MLCC)**.

- **Autonomous assets** – their broad potential applications for both military and civilian purposes and legal aspects of their use will be presented during the **Unmanned Systems Workshop** organized in cooperation with the University of Defence, Czech Technical University, EUROCONTROL, EASA and FRONTEX. Unmanned aerial vehicles will be viewed and assessed by different users, including armies, navies, police forces or air forces, and from different angles, including science, civilian applications, medicine, economy or current conflicts and combat against terrorism.

Acquisition plans and current needs and requirements of the North Atlantic Alliance and different countries will be presented in Prague as well.

Another event taking place during the Future Forces 2014 Exhibition & Conference in Prague will be a meeting of one of the most important expert working groups of **NATO - AC/225 LCG DSS (Dismounted Soldier Systems)**. The group has about 150 members from 35 countries and its mission is, inter alia, **to monitor and keep track of developments of new technologies and to formulate requirements** for equipping military units by small-calibre weapons, optics, ammunition, non-lethal weapons, personal gear and equipment and communication assets.

Another fifty experts of the **NATO Joint Chemical Biological Radiological Nuclear Defence Capability Development Group (JCBRND CDG)** will also meet during the Future Forces 2014 Exhibition & Conference in Prague and will focus on future CBRN threats and needs. They will also actively participate in the workshop mentioned above.

An autonomous chapter of the accompanying programme is the **FUTURE CRISES International Conference**, following on the previous **FUTURE of CYBER** conference and held under the professional auspices of and in cooperation with the **Armed Forces Communications and Electronics Association (AFCEA)**. The main topics it will discuss will include cyber security, protection of data in mobile networks, protection of critical infrastructure elements, inner security of the European Union and crisis management.

The Future Forces 2014 Exhibition & Conference will host not only leading representatives of top echelons of NATO, the Alliance's partners or EU, but also representatives of countries with a rapidly growing commercial potential from Latin America or Asia.

The event's meticulously composed agenda and close and intensive cooperation with and under the auspices of the Czech ministries of defence, interior, industry and trade, and foreign affairs, Czech Chamber of Economy, NATO HQ and EDA, Military Research Institute and many other institutions attract to Prague not only military and civilian experts, but also purchasers and businessmen looking for new suppliers.

Detailed information on the **FUTURE FORCES 2014** exhibition and its accompanying programme can be found at **www.natoexhibition.org**.
