SWITCH
Singapore Week of Innovation and Technology

27th — 29th October 2026

Ministry
of Industry and Trade
of the Czech Republic

FOREWORD

The word robot is Czech. It was coined in Prague in 1920, in a play about machines that learn to think for themselves – a century before anyone could build one. We have a habit of naming the future early.

The habit has roots. Czechia is a country of engineers: a hundred years of precision manufacturing, technical universities that still graduate people who can build things, and a research base that has quietly shaped the field – the mathematics underneath today's language models was written by a Czech.

What that produces is a startup scene with an unusual profile. Czech founders tend to arrive from a hard technical problem rather than from a business plan, and our home market is too small to be a destination, so companies are built for export from the first line of code. Some of them now compete at the global frontier – in cybersecurity, in speech, in data.

The companies on this stand are a small sample of it. They are not here as a showcase; they are here to find customers, partners and investors. Please talk to them.

Government Envoy
for Artificial Intelligence
Czech Republic

WWW.ADDVERY.COM↗

WHO WE ARE:

Addvery is a full-service data and AI consultancy, from strategy to secure delivery. We take companies from their first AI idea to AI used across the whole business: Addvery maps how a company really works in days with our own AI tool Verity, Skygena builds the AI on its own platform, and Geetix ships and secures it. Today that means CRM campaigns moving from copywriters to AI hyper-personalization that converts 30% better, a Czech defence manufacturer moving from scattered data to AI-enabled management reporting on a locally hosted model, and Home Credit Philippines moving from AI pilots to company-wide adoption through AI governance.

WHAT WE DO:

We take AI from pilot to production and own the whole path: Addvery picks the highest-ROI use cases and sets the data strategy, Skygena builds the AI, and Geetix ships and secures it, so nothing gets lost in the handoffs. Across 70+ projects we've delivered 98% on time and on budget. Proof point: an AI agent we built into OnePlay's live CRM lifted campaign conversion by 30% across four campaign types, in production, not a lab demo.

WHO/WHAT WE LOOK FOR:

We're looking for CEOs and senior leadership at medium and large companies who want to move faster on AI: companies trying to get AI into production quicker, still working out whether they can trust their own data, or simply looking for ways to speed up how the business runs.

aharta®

Where aha moments happen

WWW.AHARTA.COM↗

WHO WE ARE:

Aharta is a Czech technology company building infrastructure for place-based engagement and storytelling. We help organizations turn venues, events and destinations into interactive journeys people can join instantly from their phones, without downloading an app. We have delivered projects in Europe and Singapore, including Changi Airport, and are expanding our commercial presence in Southeast Asia.

WHAT WE DO:

Aharta combines mobile web experiences with QR codes, GPS, NFC, AI guides, gamification, rewards and IoT. Participants can follow routes, unlock content, complete tasks, interact with physical locations and receive personalized outcomes. Organizers get live analytics from the first scan to the final action. The same infrastructure can support event activations, visitor experiences, corporate learning, tourism and branded storytelling. We provide both a no-code platform and end-to-end project delivery.

WHO/WHAT WE LOOK FOR:

In Singapore and Southeast Asia, we are looking for event and exhibition organizers, airports, attractions, tourism boards, museums, gardens, malls, hotels and other high-footfall venues that want to increase and measure participation. We also seek corporate HR/L&D teams and local agencies, experience designers, system integrators and commercial partners that can bring Aharta into client projects. We are open to pilots, co-created use cases and longer-term partnerships.

beey AI

WWW.BEEY.IO↗

WHO WE ARE:

NEWTON Technologies is a Prague-based speech AI company with more than 20 years of expertise in speech technologies. We build secure, purpose-built AI solutions for environments where accuracy, privacy and reliability are critical — including broadcasting, healthcare, justice and public administration. Our own speech recognition models, real-time processing and domain-specific workflows run in the cloud or fully on-premise at the customer. We also develop voice-controlled technologies for people with disabilities.

WHAT WE DO:

BeeyLive provides real-time speech recognition, translation and live subtitles in more than 80 languages. For public administration and justice, we deliver secure end-to-end workflow solutions from recording and transcription to editing and publication, including fully on-premise deployments. BeeyMed brings speech AI into clinical workflows: the physician dictates naturally during a procedure and the system extracts relevant medical information directly into a structured clinical form. A pilot project is currently running at the General University Hospital in Prague (VFN).

WHO/WHAT WE LOOK FOR:

In Singapore, we are looking for partners — integrators, hospitals and broadcasters — interested in deploying secure, domain-specific speech AI and intelligent workflow automation in the region. We are also interested in how hospitals, nursing homes and community-care providers use AI assistants and robotics with patients and seniors, and in partnerships in care robotics that could be brought back to the Czech Republic.

MEWERY
growing meat with love

WWW.MEWERY.IO↗

WHO WE ARE:

Mewery is a Europe-based global biotech and deep-tech company advancing next-generation protein production. We have developed a scalable AI-driven platform for cell-cultivated biomass using a proprietary co-cultivation method that combines mammalian and microalgae cells. Our mission is to build a new generation of sustainable, nutritionally enhanced proteins without the need to raise and slaughter animals.

WHAT WE DO:

Mewery develops OMNIA, a scalable cultivated-protein platform powered by the co-cultivation of mammalian and microalgae cells in controlled cultivators. Our technology is designed to increase biomass yield, improve cell performance, enrich the final product with valuable nutrients and reduce production costs and capital intensity. We have achieved biomass yields of more than 300 g/L and are pursuing a low-CAPEX, CMO-led scale-up model, with OMNIA Pork as our first commercial application and additional meat and fish products planned over time. We are currently strengthening our technological platform, expanding international collaborations, and preparing for further scale-up and commercialization. Through partnerships with research institutions, technology providers and industry players, we aim to accelerate the development of economically competitive and sustainable cultivated meat solutions.

WHO/WHAT WE LOOK FOR:

We are primarily looking to connect with strategic and technology partners who can support the further development and scale-up of our cultivated meat platform. We are interested in meeting investors with experience in biotechnology, foodtech and deep tech, as well as companies specializing in bioprocessing, bioreactors, cell cultivation technologies, media development and other solutions relevant to large-scale cellular agriculture. We are also interested in partnerships with food manufacturers and established industry players exploring alternative proteins and new food technologies. In addition, we would welcome introductions to potential R&D collaborators, pilot-scale manufacturing partners and organizations with expertise in regulatory approval and commercialization of novel foods in Singapore and the wider Asian market.
