# Consorzio Intellimech

Consorzio Intellimech is a Consortium of 53 high-tech enterprises dedicated to interdisciplinary research in the field of Mechatronics, including advanced electronics, Data Analytics, AI, ICT systems, robotics and human-robot interaction for application in a wide range of industrial fields. Given its dimension, Intellimech is one of the most important Italian private initiatives in this sector and can count on the collaboration of a large number of enterprises, including both SMEs and Large Enterprises. The Consortium manages R&D and interdisciplinary experimental activities into pre-competitive technological platforms and the production of prototypes for innovative infra-sectorial applications to serve the partners. The Consortium wants to create an environment where their partners can view the opportunities offered by automation and robotics and by applying innovative technologies, provide technical assistance and consultation, assist in personnel training and managing the communications, technical and scientific information and disseminating technology. Intellimech is also a founder of Associazione Fabbrica Intelligente Lombardia (AFIL), and a member of Cluster tecnologico nazionale Fabbrica Intelligente (CFI).
