

city in context

City in Context is a Smart City

www.invipo.com

What is Invipo

Invipo is the software brain of an intelligent city collecting data from connected technologies and other available sources in the city. Invipo is able to evaluate the information and reports it in the city control center.

Invipo helps cities facilitates control, has positive influence on service organization and significantly improves the quality of life for it's citizens.

Municipality

- On-line information about running the city
- Visualization of information
- Interconnection of individual systems
- Implementation of smart scenarios
- Support for quick decisions
- Outputs for planning and development
- Provides statistics and reports

Service organizations

- On-line monitoring on overview map
- Scheduling maintenance and service
- Overview of technology and services
- Control all from one place
- System notifications and alarms
- Immediate reactions to the situations
- Access for Integrated Rescue System

Citizens

- Provides real-time user alerts
- Allows participation on decision-making
- Review of traffic and parking situation
- Support of clean mobility
- Navigates users to secure routes
- Smart public space
- Open public data

Smart City Concept

Invipo is a flexible, open platform developed by a Czech software company named Incinity. The Invipo platform provides integration and interoperability in smart cities.

It's not important how big a project is. Invipo connects data from different systems in one unit and offers well-arranged monitoring of outputs and effective supervision of smart projects.

City size doesn't matter

But city security matters

Today, security is at the forefront everywhere. Invipo is an open and fully secure system that each customer can configure according to his own needs and requirements. At the same time, it fulfills the requirements of the Cyber Security Law and ISO 27001. Your data will be safe with Invipo.

Legnica Poland

Invipo also operates in the city of Legnica in Poland with 100,000 inhabitants as a traffic control centre 24/7.

Competent persons can closely observe connected devices and streamline the run of transport in the city. They fully make use of the function of intelligent scenarios for cooperation of each smart technology and optimization of control.

izmir Turkey

Izmir is the 3rd biggest city in Turkey with more than 4 million inhabitants. Within the frame of the biggest smart city project in the region, we connected more than 12,000 devices featuring: control of traffic lights, detection of traffic flow, monitoring of public transport, parking with intelligent navigation, supervision of pedestrian zones, weather stations, CCTV's for traffic violation or VMS and digital information panels.

Complex project contained also build-up a new traffic control centre.

In every moment, Invipo collects and processes huge information volumes and mediates communication between city operators and technology in the streets.

Zlín Czechia

Bata's Zlín is one of the smartest cities in the Czechia. Zlín is the seat of company Incinity and our Smart lab.

Thanks to Invipo, there is a significant modernization of transport infrastructure and improvement in efficiency of public transportation. Invipo productively assists local dispatchers and improves the quality of life for residents and visitors passing through the city core's by streamlining traffic congestion.

Dubai UAE

United Arab Emirates are synonymous to wealth, progress and constant evolution. That's why Dubai first milestone was to start integrating their transport technologies into our Invipo Smart City Platform.

The first part of the puzzle is the integration of WIM (Weigh in Motion) system, which helps to monitor overloaded trucks, increase Dubai's road safety, and fight the destruction of modern roads and motorways. As result to this, it is possible to build more and more transport links that will not only be safe but will reduce repair cost.

**The next smart city
can be yours**

Award Winning Platform

Invipo has boasted several prestigious awards.

Invipo won the Intertraffic Innovation Award in 2016 and was declared the winner of the Smart Mobility Category at the same event which took place in Amsterdam. We were the first Middle East European company that has ever gained such recognition in this fair.

Moreover, Invipo won the Smart City Service Award in 2017 at the Smart Cities Innovation Summit Asia that took place in Seoul, Korea.
